

FAMILY WELLNESS – TUBA CITY, ARIZONA

The customer's goal was to find a cost effective structure to house the wellness program. This allowed the saved funds to go towards the purchase of equipment and site development. Working together, we custom designed new features such as the "open ceiling" to resolve height concerns without adding to the cost.

The weight room utilized rubber flooring with an "open ceiling" design to provide the height required for the equipment. The aerobics room was finished with a low impact wood aerobics floor and mirrored walls to suit its purpose. The modular building also incorporates a complete kitchen and fully functional locker rooms.
