

Ganado Unified School District was faced with the challenge of providing a complete vocational education annex for the upcoming school year to include specialty studies such as computer networking, culinary arts, child care instruction, and all the specialized instructional tools and spaces required for the programs to be a success. Ganado Unified School District knew that modular buildings would be the only answer to getting their school annex up in time for the new school year, and that only Modular Solutions could provide all the necessary design/build experience a specialized learning center like this would demand. This vocational program is now one of the most successful in northern Arizona, due to the dedication of the staff at Ganado, and the complete real-life learning environment the students can enrich their skill sets in.

Design elements in this modular building for Ganado Unified Schools included a recessed covered porch for in climate weather, a steel roof mansard to blend in with the existing campus architectural features, 50 year life cycle finished exterior, high efficiency heat/cool mechanical units for lower operations & maintenance cost, Full service commercial kitchen for the culinary arts program with the latest and newest commercial cooking equipment, computer technology lab with learning classrooms and hands on working environment, daycare/education program, and other hands on trade school applications. By hiring Modular Solutions, ltd to do all the concept plans the district was able to save thousands of dollars in engineering and design fees and put those dollars to use back in the classroom.
