

What is a Portable Classroom?

A portable classroom is a prefabricated building that can be installed on a school or educational campus and may be used for an indefinite period of time.

Portable classroom buildings are rated for educational use throughout the Nation. A portable classroom is typically set up on a school campus when there is a large influx of students that need a classroom space, but there is not sufficient time or allotted budget to build a structure or add on to the existing buildings.

Portable classroom buildings come in a variety of sizes and designs. Most schools will choose a modular building that is already equipped with the fire code requirements for the local jurisdictional approvals. Modular Solutions, Ltd can also provide any ADA ramps that may be required.

Modular buildings are often the most logical solution for school districts with fluctuating overcrowding challenges because modular buildings can be relocated within the district as the population changes.

Portable classroom buildings are available on a variety of lease, lease/purchase or purchase plans. When you choose Modular Solutions, Ltd for your portable classroom needs we will work with your school and district to find the most feasible answer for your short and long term space planning goals.
