

## **Prefabricated Military Barracks**

When given an order to mobilize, the military has limited resources to virtually double their capacity overnight. Modular Solutions, Ltd has the solution for military bases across the Nation.

By choosing a GSA vendor such as Modular Solutions, Ltd the military base can quickly order standard footprint barrack buildings for temporary barrack solutions or they can work with our firm on a highly customized multi-story permanent barrack facility.

The armed forces mission and command requirements can change with little or no notice. Prefabricated military buildings require that certain security features are included in the total design package. Modular Solutions, Ltd has the experience to ensure that the building will comply with the strictest of federal guidelines for national security.

By choosing a prefabricated structure the shop drawings are already included in the basic structural package, minimizing the fabrication and installation timelines required for occupancy of your new military barracks building.

In addition to prefabricated barracks, Modular Solutions can provide military SCIF facilities, flight simulators, MILCON support services, temporary modular dining facilities, temporary modular restroom latrines, temporary modular daycare facilities, prefabricated administrative facilities, modular classroom and training facilities, multi-story prefabricated accelerated permanent buildings, temporary or permanent medical & clinical facilities, modular chapel centers, and even multi-purpose recreation centers.

It makes sense for an organization as large as the US military armed forces to choose prefabricated and modular construction to adapt and flex build. It enables the military to meet the ever-changing needs of the civilian support and military forces.
